

CORRESPONDENCE.

To the Editor of *The Eugenics Review*.

21st May, 1924.

Sir,—

Mr. R. A. Fisher, in his rightly eulogistic review of *Studies in Evolution and Eugenics*, by Dr. S. J. Holmes, quotes a statement in the book which may have led your readers to believe that this influential American professor is opposed to the birth control movement. I should therefore like to add that Prof. Holmes also says in it that "nothing will be gained by attempting to force humanity back into reckless and unrestricted breeding with all the misery and high death rate which this would entail, whatever may be said for it from the standpoint of natural selection," that "birth control has come to stay," and that "birth control can be made an important adjunct to eugenics, however far from being so it may be now."

I am, Sir,

Yours respectfully,

B. DUNLOP, M.B.
